skillbank** - fundamentals of information theory a signal is a way of conveying information from one point to another. our concern is to examine how much information is conveyed by a particular signal. signals are simple in form if they do not carry much information. a mathematically correct sinusoidal varying voltage is described by the equation $v = a \sin \omega t$ by definition this extends from $t = -\infty$ to $t = \infty$... **noisy rational expectations with stochastic fundamentals** - noisy rational expectations with stochastic fundamentals carl plat chapter one thesis (ph. d.)--university of california, santa cruz, 1995. 1 introduction models of trading behavior often use the assumption of rational expectations to describe how traders form beliefs about the value of assets. in this way, beliefs are allowed to be formed endogenously. rational expectations trading models ... **an introduction to statistical signal processing - buried signals, maybe non-gaussian, which is a fact and an issue. notice that cfd extraction method is chosen for its implementation simplicity. advantages of proposed extraction of buried signals are: 1) no a-priori information on the buried signal is used, 2) extraction works without averaging or smoothing in the time or frequency domain, 3) extraction is achieved independently of the ... **fundamentals of statistical signal processing, volume iii ...** -
